

## Reducing Forest Fuels

Wildfires burn thousands of acres every year destroying life, property and natural resources.

- Fires that ignite in dry grass and brush burn very quickly.
- Certain kinds of trees in our area ignite easily and burn intensely. Removing low branches (called “ladder fuels”) can reduce the chance of flames jumping from grass into the trees causing Crown Fires.
- Removing vegetation, or choosing fire-resistant vegetation, can increase the chances of your home or property surviving a wildfire.

## Caring for the Environment

Chewack Wildfire provides a “light hands on the land” approach to fuels reduction. We can mulch, chip, burn or remove your woody debris, as well as:

- Thinning or Removing Trees and Brush.
- Deadfall / Slash Removal.
- Reduce Forest Fuels From Around Structures and Property.
- Help Maintain a Healthy Forest.
- Turn a Tightly Arranged Forest Into A “Park-like” Setting.
- Advise You, in Forest Health Management Practices.

**Licensed - Bonded - Insured**

While no one can guarantee your safety or guarantee your property will not be lost in a wildfire, fuels reduction can help reduce the risk. Chewack Wildfire does not assume any legal duty or liability whatsoever for the condition of your property or for any loss or damage resulting from the consequences of wild land fires.
